

## Associate Product Manager

SAN FRANCISCO, CA / PRODUCT / FULL-TIME

Evergrow is looking for an Associate Product Manager to help accelerate new products that help unlock low-cost financing for carbon project development at meaningful scale. You will work closely with our product team to build tooling and value-added services for project developers working to decarbonize our economy.

As someone with extremely strong communication and technical skills, you will add critical capacity to our team by bridging software, data science and product development. Whether that involves rapidly turning your mockups into pull requests, crunching user research and product analytics, or translating user interviews into value-added features, you will use your product-sense and passion to bring velocity to our early stage product development.

### About this Role:

- You'll provide data-driven prioritization of customer needs
- You'll manage the day-to-day efforts of ongoing initiatives, from standups, triaging bugs, to providing project updates to the organization
- Leverage your technical background to pick-up domain expertise quickly and support the team on understanding the state of the market, as well as legislative or regulatory changes that could impact user requirements
- Use your excellent writing skills to maintain detailed documentation, a product backlog and support the production of published material for internal and external use
- Dive in as a product and technical generalist; bringing your skills in data, software and design to build whatever is needed, test performance, and iterate quickly

### This is Rohan because ...

- He is deeply empathetic and has a strong desire to build products that support the permanent avoidance or removal of 1 billion tons of CO<sub>2</sub>e by 2030 (or 10X that)
- He moves quickly and enjoys solving problems with whatever tools get the job done
- He brings a strong understanding of carbon reduction technologies and carbon commodity markets
- He has experience gathering user feedback and advocating on their behalf
- He has the ability to distill data into actionable insights
- He has shown success in working with small teams as a technical consultant & product lead
- He loves learning alongside engineers, designers and other product managers to refine his craft
- He has the ability to balance an insatiable curiosity with effective prioritization
- He strives for excellence and is seeking to grow alongside an early-stage, experimental, quickly-growing startup
